## With Tufline ${ }^{\circledR}$ Sleeved Plug valves, design more economical, flexible, and compact fluid handling systems. <br> Bi -directional flow, simple actuation, lightweight, compact design, and multiport configurations all facilitate improved system design.

## Superior, longer-lasting in-line sealing.

The inert PTFE sleeve completely surrounds the plug. The sleeve provides a large, circumferential sealing surface from port to port. Open, closed, or rotating, the seal is assured.

No ball or gate valve can match this sealing power.

## Secure sealing with no cold-flow, deformation, or sleeve rotation and greatly minimized potential for blow out.

The sleeve is securely nestled in the valve body. High-pressure ribs, top and bottom retention, and $360^{\circ}$ port defining lips all assure sleeve containment.

## No seizing. No sticking.

As the plug rotates, the $360^{\circ}$ lips provide a self cleaning action to remove scaling and adhering media.

High pressure sealing ribs
Sleeve relief area
Top retention of sleeve
Port defining lips

## No cavities. No contamination.

There are no body cavities where flow media can accumulate and contaminate future processing. The cavity-free design also prevents sticking.

## Eliminate unscheduled downtime and maintenance . . . plus get greatly extended service life.

Many processors experience dramatic cost reductions when they switch from ball and gate valves.

A simple turn of the top adjustment bolts keeps the sleeve sealing tightly and the valve in service far longer.

Two independent sealing systems provide double protection against atmosphere leakage.

Turn the page for details about this valve's superior double stem seal ...

Trouble-free sealing is provided by the large, full-circumferential PTFE sleeve. No ball or gate valve can match this sealing capacity.

Sleeves are easily replaced inline.

The PTFE sleeve has a low coefficient of friction. It acts as a lubricant. Ease of operation is assured, even when the valve is left open or closed for extended periods.

Standard cost and greatly extended service life assure exceptionally low, long-term cost-of-ownership.

## The Tufline ${ }^{\circledR}$ sleeved plug valve pays for itself many times over with more up-time and greatly extended service life.

There's a fully adjustable in-line seal and dual stem seal.
Bolts in the top cover provide quick and easy adjustment. Adjust out in-line leakage between shutdowns. Adjust out potential stem leakage.

No ball or gate valve offers this capability.

## Stem Seal 1.

The primary stem seal is around the circumference of the plug. Flow media is prevented from reaching the stem.

> There are two independent environmental seals.

You get double
seal protection at no extra cost.

## Stem Seal 2.

The secondary backup seal system provides a wide comprehensive backup seal along the top edge of the plug and the stem.

## Unmatched stem sealing.

Tufline's standard dual stem seal is clearly superior to those of gate valves, ball valves, other plug valves, and many expensive valves with extended auxiliary packing.

## $360^{\circ}$ lips.

Port defining lip were developed and patented by Tufline.
The lips surround the ports.
The lips improve valve performance and extend service life by:

- Preventing sleeve cold flow and deformation.
- Eliminating sleeve rotation.
- Breaking up and removing adhering, scaly deposits from the outer surface of the plug as it rotates.

## 3-Way port arrangements.

Tufline 3-Way Weld End valves bring economy, flexibility, and more compact system design to thousands of applications.

## Bi-directional flow for more flexibility.

In the diagrams the color indicates the path of fluid flow. Bi-directional flow provides more system design options.

## Shutoff.

Only the Type A plug will shut off the flow. With Type AX, C, and D plugs, there is always flow between two or more ports.

## Technical information

## Applications

Ash sluice service water systems
Breweries and distilleries
Chemical applications
Closed and open systems
Condensate polishing
Demineralizers
Emergency coolant
Etched disc filters
Evaporators
Fats, oils, fatty acid and detergents
Filter demineralizer
Food processing
Leaf type filters
Oil purification systems
Petrochemicals
Petroleum production
Pulp and paper
Raw river make-up water
Slurries
Standby generators
Textiles
Water treatment purification

## Actuators

All valves can be supplied with a variety of manual, pneumatic or electric actuators. All 166, 1366, 1666, 136 and 1336 valves are drilled and tapped for actuator mounting.

## Vacuum service

All weld end valves are satisfactory for vacuum service to as low as .01 microns in absolute pressure. However, special cleaning is required to achieve this rating. Vacuum ratings have been established by independent laboratories by helium leak tests on mass spectrometers.

## API-607 Standards

Tufline Fire Tested Sleeved Plug Valves have been tested in accordance with API-607 - Fourth Edition - Section 4.2-Specifications For External Leakage. These valves exceed the sealing requirements specified in those standards. A tight external seal was maintained even after the PTFE sleeve and sealing parts were totally destroyed by fire.

## Oxygen and chlorine valves

Valves designated for oxygen or chlorine service are thoroughly cleaned, tested and dried per internal Xomox oxygen and chlorine standards. The ends are then sealed and the valves are packaged in plastic bags. Chlorine valves are in accordance with Chlorine Institute recommendations.

## Control Fugitive emissions

This optional top seal package provides exceptional control of fugitive emissions. It meets or exceeds the most stringent current regulatory requirements. Tertiary sealing is provided at the stem by the encapsulated, flexible graphite stem seal and at the body/cover joint by the graphite cover seal ring.

## No cavities

Tufline weld end valves have no pockets. The sleeve completely surrounds both ports as well as the top and bottom of the plug, eliminating any areas where contaminates could be trapped. Since the valves are double block valves and seat both upstream and down-stream, it is necessary to limit the differential pressure when the valves are opened and closed.

## Special services

Tufline offers extensive engineering expertise and experience with the broadest range of industry requirements, and is therefore able to offer many special services and capabilities.

Tufline can also assure expertise in welding and fabricating products and assemblies from the broad range of materials in which their products are manufactured.

## Custom designs and modifications

The products featured in this catalog may be obtained in other sizes and materials from the Tufline Special Products Group, which also offers design, engineering and manufacturing services for custom products and modifications.

## ACAUTION

When welding austenitic stainless steels, corrosion resistance will be affected in material adjacent to the weld joint due to sensitization.

## Standard sleeve material maximum temperature ratings:

| Sleeve Material | Max. <br> Temp. |
| :---: | :---: |
| UHMWPE | $180^{\circ} \mathrm{F}$ |
| Xomox 7 | $300^{\circ} \mathrm{F}$ |
| PTFE | $400^{\circ} \mathrm{F}$ |
| Tufline-475 | $475^{\circ} \mathrm{F}$ |
| Tufline-600 | $600^{\circ} \mathrm{F}$ |

# Materials of construction 

## Standard body <br> and plug materials:

316L stainless steel
(ASTM A351 GR CF3M)
Carbon steel
(ASTM A216 GR WCB)

Notes:

1. Various combinations of body and plug materials are available.
2. Adjusting bolts will be either ASTM A 193 GR. B8 or B8M.
3. Cover bolts for carbon steel or ductile iron bodied valves will be ASTM A 193 Gr. B7.

Cover bolts for alloy bodied valves will be either ASTM A

Other materials available including:
316 stainless steel
(ASTM A351 GR CF8M)
Alloy 20
(ASTM A351 GR CN7M)

| Body and Plug ${ }^{1}$ | $\begin{aligned} & \text { 316SS, Alloy } 20 \\ & \text { Hastelloy B \& C } \end{aligned}$ | Carbon steel | Monel <br> Nickel |

| Thrust Collar | 304SS |  |  |
| Metal Diaphragm | 304SS | 304SS | Monel |
| Plastic Diaphragm | PTFE, UHMWPE, Xomox-7, Tufline-475, Tufline-600 ${ }^{4}$ |  |  |
| Wedge Ring | PTFE, UHMWPE, Xomox-7, Tufline-475, Tufline-600 ${ }^{4}$ |  |  | 193 Gr. B8 or B8M

4. When specifying a Tufline600 sleeve, the plastic diaphragm and wedge ring are also Tufline-600 material.

Valves with Tufline-600 sleeves are supplied with a tertiary top seal as standard.

Note: Other materials are available for bolts, covers and some top seal components on customer request.

## Xomox Actuators \& Automation Accessories

## Xomox XRP ${ }^{\text {TM }}$ Actuators

The unique features of Xomox XRP Pneumatic Rack \& Pinion Actuators include:

- A balanced pinion which does not require an external retaining clip to prevent the pinion from blowing out.
- Individual single point adjustment for both the CW and CCW directions.
- 98 degrees of total travel on the most popular sizes.
- Vertically aligned air passages allow increased air flow minimizing cycle time.

## Matryx ${ }^{\otimes}$ Vane Actuators

Matryx Vane Actuators provide reliable and efficient remote control of any type of rotary operation. They are used for ball, plug, and butterfly valves as well as other mechanisms such as dampers, switches, and safety devices.

They are available up to 30,000 in-lbs of torque.

## Xomox Limit Switches

A wide variety of switching options and other automation accessories are available.

## Xomox Automation \& Service

Centers are located throughout the
United States. They provide:

- Automated valve packages
- Valve modifications
- Valve repair
- Application assistance
- On-site inventories of valves, actuators, and accessories assure fast turn-around.
- A new-valve factory warranty backs every automated, modified, and repaired valve.

Xomox Sizing Program will help you design a more efficient and economical processing system and assure proper actuator size selection.
